Objective

Recent cybersecurity graduate with a comprehensive foundation in secure systems, network defense, and ethical hacking. Seeking an entry-level Cybersecurity Analyst role to apply technical and analytical skills in protecting digital assets, identifying threats, and supporting organizational security posture.

Education

University of Mary Washington — Fredericksburg, VA

Bachelor of Science in Computer Science, Major: Cybersecurity

Graduation: May 2025

- Completed hands-on labs in ethical hacking, network security, and cryptography
- Developed practical skills in vulnerability assessment, secure system administration, and incident response

Relevant Coursework

- CPSC 345 – Introduction to Information Security
- CPSC 435 – Advanced Cybersecurity
- CYBR 458 – Network Security
- CYBR 461 – Ethical Hacking
- CPSC 318 – System and Network Administration
- BLAW 300 – Cybersecurity Law
- MATH 253 – Introduction to Cryptography

Technical Skills

- Tools: Kali Linux, Nmap, Metasploit, Wireshark, tcpdump, VirtualBox, Linux CLI
- Languages: Python, Bash scripting
- Concepts: CIA triad, vulnerability management, penetration testing, network defense, risk mitigation

Projects & Labs

Penetration Testing Simulation

- Performed reconnaissance, exploitation, and post-exploitation phases in isolated lab environments
- Identified system vulnerabilities and documented clear remediation recommendations
- Practiced responsible disclosure and reporting techniques aligned with industry standards

Network Configuration & Monitoring

- Designed and secured virtual networks using segmentation and firewall rules
- Monitored traffic with Wireshark and tcpdump to detect anomalies and validate IDS alerts
- Applied defensive configurations to improve overall network resilience

Cryptography Lab

- Implemented symmetric and asymmetric encryption algorithms (e.g., AES, RSA) in Python
- Evaluated real-world applications of cryptographic protocols in secure communications and data protection

Professional Development

- CompTIA Security+ (In Progress)
- TryHackMe: Complete Beginner Path, Intro to Cyber Security
- Hack The Box: Active participant; completed beginner-friendly machines and challenges
- Gained familiarity with CTF (Capture The Flag) formats and practical offensive/defensive techniques

Soft Skills

Problem solver | Adaptable learner | Clear communicator | Team collaborator | Detail-focused |
Proactive mindset
