Objective

Cybersecurity graduate passionate about strengthening collaboration between public and private sectors. Seeking roles in cybersecurity innovation, government contracting, or technology acquisition programs where I can contribute technical knowledge and analytical thinking to advance national and organizational security initiatives.

Education

University of Mary Washington — Fredericksburg, VA

Bachelor of Science in Computer Science, Major: Cybersecurity

Graduation: May 2025

- Interdisciplinary focus combining technical cybersecurity with law, ethics, and public policy
- Prepared for roles at the intersection of technology, governance, and strategic defense

Relevant Coursework

- BLAW 300 – Cybersecurity Law (CISA, FISMA, data sovereignty)
- CPSC 302 – Computer Ethics (accountability, transparency in technology)
- CPSC 435 – Advanced Cybersecurity (threat intelligence, national security implications)
- CPSC 345 – Introduction to Information Security (critical infrastructure protection)
- CYBR 458 – Network Security (defensive strategies for enterprise and government systems)
- CPSC 414 – Network Principles & Applications (infrastructure fundamentals)

Technical & Strategic Skills

- Tools: Kali Linux, Nmap, Wireshark, VirtualBox, Linux CLI, Python
- Frameworks: NIST Cybersecurity Framework, CIS Controls, MITRE ATT&CK
- Concepts: Public-private partnerships, SBIR/STTR innovation programs, cyber policy, federal acquisition, and security lifecycle

Projects & Labs

Penetration Testing Simulation

- Conducted vulnerability assessments on simulated critical infrastructure environments
- Developed mitigation strategies aligned with NIST guidelines for federal system protection
- Documented findings and presented risk-based recommendations for remediation

Network Configuration & Monitoring

- Designed and secured virtual networks using defense-in-depth principles applicable to government and utility sectors
- Implemented access controls and logging mechanisms to support policy compliance and audit readiness

Cryptography Lab

- Studied encryption standards used in government communications (e.g., AES-256, PKI)
- Researched post-quantum cryptography and its implications for future cybersecurity policy and standards

Professional Development

- Presidential Management Fellowship (PMF) Program – Eligible applicant (Recent Graduate)
- Research: Examined the role of DHS CISA in coordinating public-private cyber incident response
- TryHackMe: Government & Defense Security Learning Path (federal security practices, policy alignment)

Soft Skills

Analytical thinker | Policy-aware | Strong written and verbal communication | Team player |

Forward-looking mindset | Adaptable learner
