Objective

Detail-oriented cybersecurity graduate with strong foundational knowledge in network defense, threat detection, and incident response. Seeking an entry-level SOC Analyst position to leverage hands-on lab experience in traffic analysis, log monitoring, and alert triage within a 24/7 security operations environment.

Education

University of Mary Washington — Fredericksburg, VA

Bachelor of Science in Computer Science, Major: Cybersecurity

Graduation: May 2025

- Completed hands-on labs in network monitoring, firewall configuration, and anomaly detection
- Trained in core security operations principles, including the cyber kill chain and incident response lifecycle

Relevant Coursework

- CPSC 435 – Advanced Cybersecurity (threat modeling, detection strategies)
- CPSC 345 – Introduction to Information Security
- CYBR 458 – Network Security (IDS/IPS, firewalls, secure architectures)
- CPSC 414 – Network Principles & Applications (TCP/IP, DNS, routing)
- CPSC 318 – System and Network Administration (Linux, Windows, access control)
- BLAW 300 – Cybersecurity Law (compliance, data privacy)

Technical Skills

- Tools: Wireshark, tcpdump, Nmap, Kali Linux, VirtualBox, SIEM (simulated), IDS/IPS
- Languages: Python, Bash
- Concepts: Log analysis, packet capture, IOC identification, SIEM workflows, NIST Cybersecurity Framework

Projects & Labs

Network Configuration & Monitoring

- Configured virtual network segments and applied firewall rules to restrict unauthorized access
- Used Wireshark and tcpdump to capture and analyze traffic for suspicious behavior
- Simulated IDS alerts and practiced initial triage, documentation, and escalation procedures

Penetration Testing Simulation

- Conducted vulnerability scans using Nmap and evaluated open ports and services
- Analyzed attack patterns to improve detection rules and defensive monitoring
- Delivered a technical report with actionable recommendations for SOC teams

Cryptography Lab

- Implemented basic encryption algorithms (e.g., AES, RSA) in Python
- Evaluated secure communication protocols and discussed encryption's role in data protection and logging

Professional Development

- CompTIA Security+ (In Progress)
- TryHackMe: SOC Level 1, Cyber Defense Learning Path
- UMW Cybersecurity Lab Series – Incident Response Exercises

Soft Skills

Attention to detail | Calm under pressure | Clear communication | Proactive learning | Team collaboration
